Improving outcomes for patients with pancreatic cancer (PC) is desperately needed, with patients diagnosed in the UK still having a poor prognosis. Currently the average life expectancy for a patient with PC is between 4 to 6 months and only 3% of patients survive beyond 5 years¹.

This 5-part Pancreatic Cancer Webinar Series (PCWS) will focus on bridging the gap between the variation in care between secondary and tertiary sites, novel treatment strategies, chemotherapeutic agents and the fundamental importance of nutritional failure associated with pancreatic cancer.

The webinar series will provide an overview of the current best practice and is aimed at those clinicians and allied health professionals who treat patients with pancreatic cancer in primary, secondary and tertiary care.

Pancreatic Cancer Webinar Series

Webinar 2 details

16th December 2020 | 12:00 – 13:00

**Missed opportunity? Treatment of Pancreatic Exocrine
Insufficiency (PEI) across the UK: The RICOCHET national audit**

Learning objectives

How does care vary across the UK and can this impact outcomes?
Managing PEI in resectable and unresectable pancreatic cancers
The impact of nutrition on pancreatic cancer outcomes

*Professor Prof Enrique
Domínguez-Muñoz*

*Mr Keith
Roberts*

*Mr Richard
Wilkin*

Future webinar dates and titles

21st January 2021

Optimal pathways for non-metastatic pancreatic cancer

17th February 2021

Non-surgical and emerging therapies in pancreatic cancer

18th March 2021

Novel strategies in pancreatic cancer
